Oil It
Once a
Year

The strong, light-running wheel of the Aermotor has never been equalled. Thousands of tests, and forty years of experience have proven the wheel to be exactly right. It runs in the lightest breeze.

Only six bolts are used in this wheel. The round tension arms hook through the hub and are securely held so that it is impossible for them to work loose.

The Auto-Oiled Aermotor is completely and perfectly self-oiling. Whenever the wheel revolves a constant stream of oil flows into every bearing. The shafts run in oil. The high-grade Babbitt bearings when flooded in oil are practically frictionless. The gears run in oil in a tightly enclosed case. Every cog is covered with oil. There is oil everywhere, yet none of it is wasted, because all surplus oil flows back into the gear case to be used over and over again.

THE AUTO-OILED AERMOTOR was a Great Success from the beginning. It has been made Better and Better as experience has shown the possibility of improvement. The AUTO-OILED AERMOTOR of today is a wonderfully reliable and efficient windmill.

The Aermotor Co. originated the steel windmill and the steel tower. It has always been most progressive and most skillful in developing improvements.

Windmill-Parts.com

The Auto-oiled Aermotor after nine full years of the severest tests in every part of the world, has fully demonstrated its great superiority.

Aermotor prices are always low, and are based on cost of production plus a small margin of profit on a very large output. The Aermotor purchaser has the advantage of being able to buy a superior article at a very reasonable price.

Windmill-Parts.com

The Aermotor owner is always pleased to have his neighbors and friends notice his windmill. The Aermotor is the most widely advertised, most generally used and most favorably known windmill.
